

March 2024 Trading Hours
 Monday - Friday 8.30am - 5.30pm

Note we are **CLOSED** on Public Holidays

- ◆ Monday 11th March (Adelaide Cup)
- ◆ Friday 29th March (Good Friday)
- ◆ Monday 1st April (Easter Monday)

Introduction to Utrisha® N Cereals & Canola

What is Utrisha® N?

Utrisha N is a nitrogen fixing biofertiliser. The naturally occurring bacteria, *Methylobacterium symbioticum*, converts atmospheric nitrogen into ammonium within the leaf of the plant. Unlike nitrogen stabilizing products that protect applied fertiliser, Utrisha N provides additional nitrogen directly to the plant. No plant energy is required for this process. The bacteria survive by scavenging methanol, which is a waste product of plant metabolism.

How Utrisha® N works

1. Utrisha N is applied as a foliar spray and enters the plant through the leaf stomata, colonizing the leaf and translocating to surrounding leaves, stems and roots. Effective colonization takes around 7 days depending on the growing conditions.
2. The process to convert atmospheric nitrogen(N2) into ammonium (NH4+) begins after a week, and plant available nitrogen is supplied from within the plant for as long as there is green tissue in the crop. Utrisha N only needs to be applied once per year to annual crops like wheat and canola.

Enhances Nitrogen Use Efficiency

Utrisha N provides a sustainable, alternative source of nitrogen which reduces dependency on nitrogen from the soil. Utrisha N delivers access to nitrogen all season long, without the loss from leaching into water tables or volatilization, helping to reduce potential greenhouse gases lost to the atmosphere.

WHY USE UTRISHA N NUTRIENT EFFICIENCY BIOSTIMULANT?

- Utrisha N enhances plant growth & resilience by improving nitrogen availability to the plant throughout the growing season.
- Maximizes crop potential through improved nitrogen management, offering proven, predictable performance.
- Works side by side with evolving farming practices with simple, flexible storage and application.
- Utrisha N meets changing market expectations by providing a sustainable source of nitrogen.

ANIMAL HEALTH

365
Advanced year round supplementation to enhance bone development, milk production, wool growth & reproductivity. For best results have available at all times.

DRY FEED & STUBBLES
A high protein, multi nutrient block specifically for use with stubbles & during the dry season. Assists with reproductive issues, lambing survival rates & wool growth.

EWE LITTLE BEAUTY PRELAMING
A high energy block aiding in the prevention of pregnancy toxæmia (twin lambing disease). Assists in giving your lambs the very best start in life!

Contact us on 1800 804 096 or visit our website olssonblocks.com.au for more information!

Ewe Beauty 365

An animal's performance is limited by the quality of feed, and even the best looking pastures can lack the nutrients needed for stock to really thrive.

Olsson's Ewe Beauty 365 is an advanced protein block containing a balanced array of trace elements, vitamins & minerals.

This supplement provides targeted supplementation for sheep grazing all types of pastures in all seasons, supporting bone development, milk production, wool growth & reproductivity. Added benefits include increasing lambing survival rates, decreasing stock loss, and providing optimal feed conversion.

Ewe Beauty 365's block form is weather resistant and regulates the intake of nutrients, meaning the sheep can only consume nutrients as fast as they can absorb them. This leads to healthier animals, and a healthier wallet.

EWE LITTLE BEAUTY, PRE LAMBING (Previously known as LAMBLI)

Late pregnant sheep and goats on poor quality dry feed are deficient in glucose precursors, and feed intake is reduced. The drain of glucose to the developing lamb reduces availability of glucose to the ewe and results in pregnancy toxemia (twin lamb disease). Olsson's Ewe Little Beauty Pre Lambing is a high energy block that supplies glucose to the ewe, assisting in prevention of pregnancy toxemia. Available with 20% Glycerol. Feed on an ad lib basis year round in conjunction with Peak 50 to maximize production from ewe/goat.

ANIMAL HEALTH

We have plenty of vaccines in stock. See us in store for your animal health requirements.

Vaccinations

For Ewes Pre-Lambing

Vaccination is essential to the health of the ewe and lamb during pregnancy, through parturition and whilst lactating. Pregnancy causes a suppressed immunity level in the ewe which reduces the ability to protect the ewe and unborn lamb from debilitating and deadly diseases.

PRE-LAMB PROGRAM EVERY EWE, EVERY YEAR

PREVIOUSLY UNVACCINATED EWES JOINING TO 8 WEEKS PRIOR TO LAMBING	ALL EWES 4 WEEKS BEFORE LAMBING
<ul style="list-style-type: none"> GlanEry[®] 7in1 B12 1st "Priming" dose Glanvac[®] 6S B12 1st "Priming" dose OR Eryvac[®] 1st "Priming" dose 	<ul style="list-style-type: none"> GlanEry[®] 7in1 B12 Annual "Booster" dose Glanvac[®] 6S B12 Annual "Booster" dose OR Eryvac[®] Annual "Booster" dose
<p>45° Skin Subcutaneous Space Muscle</p>	<ul style="list-style-type: none"> STARTECT[®] OR Q-drench <p>Drench all ewes Add the extra protection of Sheepguard Long Acting injectable drench when extended worm protection is required.</p>
